SUMMARY

2025 CSE (Data Science) graduate with a solid grounding in data structures, algorithms, and object-oriented design, plus hands-on experience building and shipping ML and web projects end-to-end. Currently deepening DSA practice on GeeksforGeeks/LeetCode. Comfortable with ambiguity, quick to pick up new tools, and focused on writing correct, maintainable code.

EDUCATION

Malla Reddy College of Engineering and Technology

Hyderabad, India

B.Tech, Computer Science & Engineering (Data Science) — CGPA: 7.82/10

2025

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Management Systems, Computer Networks

TECHNICAL SKILLS

- **Languages:** Python, JavaScript (basics), SQL
- **CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Design, Complexity Analysis, Operating Systems, DBMS
- **Web:** HTML, CSS, Bootstrap, Responsive Design, React basics
- **Databases & Tools:** MySQL, SQLite, Git/GitHub, Node.js (basics), Scikit-learn, OpenCV, Streamlit
- **Currently Practicing:** DSA problem-solving on GeeksforGeeks and LeetCode

PROJECTS

Blood Group Detection using Image Processing

GitHub

- Built a CNN-based image classification model in Python to predict blood group from fingerprint images, reaching ~89.7% validation accuracy.
- Designed the end-to-end pipeline — preprocessing (grayscale, normalization, resizing), ridge-pattern/minutiae extraction, training, and evaluation with train/test splits to reduce overfitting.
- Deployed an interactive Streamlit interface for real-time predictions, turning a research problem into a usable, demoable tool.

Wine Quality Prediction

GitHub

- Implemented a Random Forest classifier in Python/Scikit-learn to predict wine quality from physicochemical attributes.
- Engineered the data pipeline: handled missing values and outliers, and applied feature selection to isolate the most predictive variables.
- Validated model performance using train-test splits and cross-validation, comparing accuracy across configurations to select the best-performing model.

Student Result Management System

GitHub

- Built a full-stack web app with React.js on the frontend and MySQL on the backend to manage student records and results.
- Designed relational database schema and wrote SQL queries for CRUD operations, focusing on data integrity and query correctness.

CERTIFICATIONS & TRAINING

- Pursuing Python Full Stack Development — NxtWave
- Python for Data Science, AI Development — Coursera (IBM)
- Programming with Python — NxtWave
- SQL — NxtWave
- Node.js — NxtWave
- Building Your Own Static Website — NxtWave
- Building Your Own Responsive Website — NxtWave
- Cambridge B2B Certificate

STRENGTHS

- Habit of building projects end-to-end — from data/algorithm design through to a working, demoable product.
- Comfortable working independently, reading documentation, and picking up new languages, frameworks, and tools quickly.
- Actively strengthening core DSA and problem-solving skills in preparation for technical interviews.
